COMICCRAFT

Requirement Analysis Phase

AI Comic Story Creator – Project Phase Documentation

This document contains 10 pages covering the selected project phase.

1. Requirement Analysis Introduction

• Requirement analysis identifies what ComicCraft must do and the conditions under which it should operate.

• Requirements are divided into functional requirements and non-functional requirements.

Phase	Requirement Analysis Phase

Project	ComicCraft – AI Comic Story Creator

2. Functional Requirements

• The system should accept a topic from the user.

• It should generate or construct a comic outline, story, narration, and dialogue.

• It should create or process panel images and present the final comic.

3. User Requirements

• The user needs a simple interface.

• The user should be able to enter a topic clearly and receive a structured result.

• The system should provide understandable feedback when an input or service fails.

4. Backend Requirements

• The backend should provide routes for comic generation.

• Routes should validate input and handle expected errors.

• The backend should manage generated content and output files.

5. AI Requirements

• The AI workflow may include outline generation, story generation, and image generation.

• The prompts should produce panel-oriented content.

• External AI services require valid configuration and credentials when used.

6. Non-Functional Requirements

• The application should be easy to use, maintainable, reasonably fast, and reliable.

• The code should be organized so individual components can be modified without changing the whole system.

Phase	Requirement Analysis Phase

7. Input and Output Requirements

• Input includes a topic or story idea.

• Output includes panel descriptions, narration, dialogue, images, and potentially an exported comic file.

• Output should be readable and arranged in panel order.

Phase	Requirement Analysis Phase

8. Error Handling Requirements

• The system should handle invalid input, unavailable AI services, file errors, and unexpected exceptions.

• Clear error messages should be returned instead of allowing the application to terminate unexpectedly.

Phase	Requirement Analysis Phase

9. Requirement Priorities

• Core requirements are topic input, story workflow, panel generation, and result display.

• Export and advanced customization can be treated as additional features depending on project time.

10. Requirement Analysis Conclusion

• Requirement analysis converts the project idea into measurable system expectations.

• These requirements guide the design, implementation, and testing stages.
