COMICCRAFT

Project Testing Phase

AI Comic Story Creator – Project Phase Documentation

This document contains 10 pages covering the selected project phase.

1. Testing Introduction

• Testing checks whether ComicCraft behaves according to its requirements.

• Testing should cover individual modules and the complete workflow.

2. Unit Testing

• Test outline generation with different topics.

• Test story generation with valid panel outlines.

• Test image generation with valid prompts and output directories.

3. Integration Testing

• Check whether outline output is correctly passed to story generation.

• Check whether story content is correctly used for panel creation.

• Check whether generated files are available to the frontend or export process.

4. Input Testing

• Test normal topics, empty input, very short input, and special characters.

• The system should reject or safely handle unsuitable input.

5. API Testing

• Check successful API requests and expected JSON responses.

• Test invalid requests and verify that meaningful error responses are returned.

6. File Testing

• Check whether required folders are automatically created.

• Verify that panel files are saved with usable names and that export directories work correctly.

7. User Interface Testing

• Check buttons, input fields, generated output, loading behavior, and error messages.

• The interface should remain understandable on common screen sizes.

8. Error and Exception Testing

• Simulate missing configuration, failed AI calls, invalid JSON, and unexpected exceptions.

• The application should fail gracefully rather than crash without information.

9. Test Results Recording

• Record test case, input, expected result, actual result, and status.

• Failed cases should be corrected and tested again.

10. Testing Conclusion

• Testing improves confidence that ComicCraft works as intended.

• A final regression test should be completed before demonstration.
